

TUBELED_40 II Integrated

Elegant, strong, flat and robust

The TUBELED_40 II Integrated recessed light is designed for initial equipment and retrofitting of machines and equipment. The sizes of the outer panels are based on the dimensions of standardized installation shafts of machine tools. The sealed LED luminaire is built in to be resistant to cooling lubricant as well as chip-proof and oil-resistant. Its absolute advantage is the homogeneous and low-glare illumination of work spaces, for example in machine tools.

The Technology

- Aluminium body and a glare control with an opal white safety glass cover
- Heat dissipation to the rear – no cooling lubricant burn-in
- Seamless sealing on the installation surface by means of a seal sprayed onto the back
- Connection using an M12 connector

Your benefits

- Flat and space-saving installation
- Minimum interfering edges – no areas where chips could settle

Areas of application

- Machines or work environments with little space
- Turning, drilling, milling and grinding machines
- Injection moulding machines, extruders and blow moulding machines

Designs

- 6 different lengths and 2 widths of the glare control
- External dimming possible
